

Delores Mincarelli

Data Scientist

Delores is passionate about helping companies improve their bottom line through data analysis and machine learning. She is adept at coming alongside business stakeholders to understand their problems, gather and transform their data, and follow through to provide meaningful insights. She does the technical work as she builds data literacy at all levels of the organization and demystifies the process with engaging storytelling and presentations. Her customers have spanned startups, non-profits, and large enterprises.

She started her career at Procter & Gamble as a manufacturing engineer and manager, then took a supply-chain management role in which she developed her initial passion for using data to help predict constraints in material supply systems.

She earned her Bachelor's of Science in Chemical Engineering from Clarkson University and Master's of Science in Business Analytics from the University of Cincinnati.

She and her husband, Terry Cole (also a GLP speaker), have a heart for equipping the next generation of leaders. They have lived in China and Singapore and now reside in Louisville, Kentucky. They like to "race-cation", where they can combine their passion for running and cycling with seeing the world, one event at a time.
